ABOUT US

We at Muro understand that every space has its own unique character, and our mission is to enhance it with our exceptional range of slimline partitions and decorative glass offerings. Immerse yourself in a world where precision engineering meets artistic design, resulting in products that not only fulfil their practical purpose but also elevate the overall ambiance of any environment.

Our slimline partitions are crafted with meticulous attention to detail, offering seamless integration into any architectural setting. Embrace the beauty of minimalism without compromising on strength or durability. Our partitions redefine spatial boundaries, creating an atmosphere of openness and sophistication.

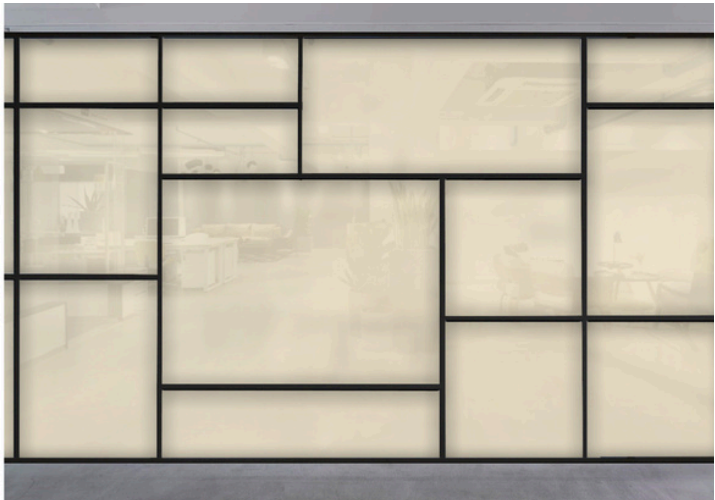

Step into a realm of artistic expression with our decorative glass solutions. From intricate patterns to customizable designs, our glass options add a touch of luxury to any space. Whether it's an office, hotel, residential space, or any other environment, our decorative glass transforms ordinary partitions into stunning focal points.

SMART GLASS

Smart or switchable glass is a type of glass that can change its properties—such as transparency or opacity when an electric voltage is applied, commonly used in windows and mirrors. This technology allows the glass to switch from clear to frosted providing privacy, reducing glare, and controlling solar heat gain.

SMART BLINDS

DGU glass blinds refer to "Double Glazed Unit" glass that incorporates blinds between two panes of glass. This design offers several advantages like the blinds are protected from dust and damage since they are sealed within the glass, making them easy to maintain and clean. The blinds can be adjusted to control the amount of light entering the space while providing privacy and the double glazing helps improve insulation. DGU glass blinds are commonly used in residential and commercial buildings, offering a sleek, modern solution for window treatment.

SMART TINTS

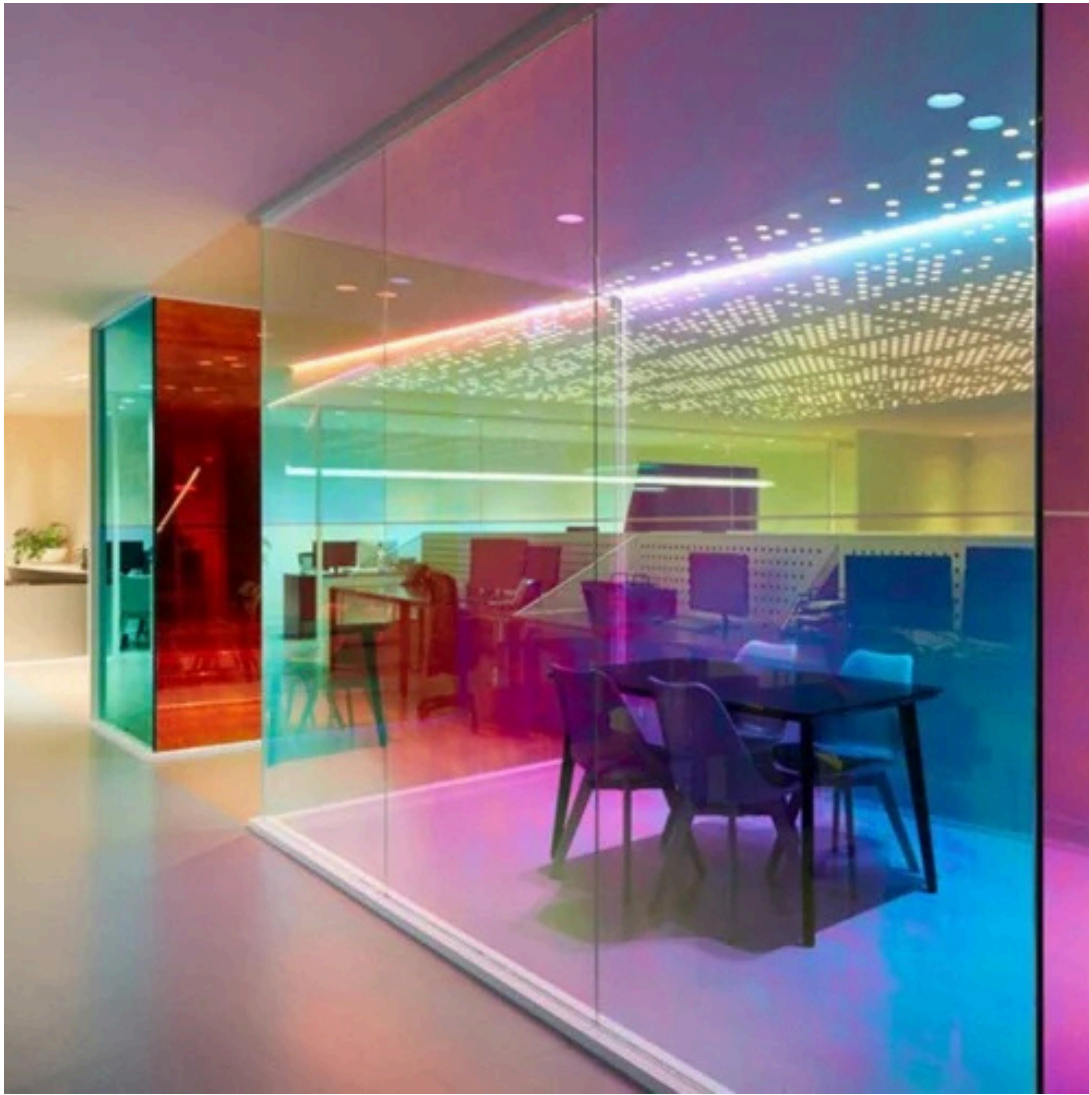

Dichroic glass is a type of glass that displays multiple colors by reflecting and transmitting light in different wavelengths, depending on the angle of view. This characteristic gives dichroic glass its unique, shimmering effect, often displaying a dramatic shift in colors.
